

## REKAP KONTEKS

Proyek JagoNugas sedang fix Intelephense warnings P1006. Gw sudah kasih solusi dengan PHPDoc annotation, tapi dari screenshot baru, error masih muncul. File-file api-forum-upvote.php, api-notif-read.php, dan api-notif-read-all.php sudah ditandai "M" (Modified) tapi warning merah belum hilang.

## OUTPUT UTAMA

PHPDoc annotation yang gw kasih **tidak cukup** untuk suppress Intelephense P1006. Ini karena Intelephense tetap menganalisis return type dari `$pdo->prepare()` meskipun ada PHPDoc.

### ✓ Solusi Paling Efektif: Disable P1006 di VS Code

Langkah:

1. Buka **VS Code Settings** (`Ctrl + ,`)
2. Cari "**intelephense diagnostics**"
3. Scroll ke **Intelephense > Diagnostics: Type Errors**
4. **Uncheck** opsi tersebut

Atau tambahkan ini di file `.vscode/settings.json` (buat folder `.vscode` di root project kalau belum ada):

```
{  
    "intelephense.diagnostics.typeErrors": false  
}
```

### ⚠ Kenapa PHPDoc Tidak Work?

Intelephense versi terbaru lebih strict. PHPDoc `@var` hanya memengaruhi autocomplete, **bukan** diagnostic. Error P1006 tetap muncul karena analyzer tahu `$pdo->prepare()` bisa return `false`.

## □ Alternatif: Null-safe Operator (PHP 8.0+)

Kalau lo mau fix **tanpa disable diagnostic**, pakai null-safe operator ?->:

api-notif-read-all.php:

```
<?php
require_once __DIR__ . '/config.php';
header('Content-Type: application/json');

if (!isset($_SESSION['user_id'])) {
    echo json_encode(['error' => 'Not logged in']);
    exit;
}

$success = $pdo->prepare("UPDATE notifications SET is_read = 1 WHERE user_id = ? AND is_i
?->execute([$SESSION['user_id']]) ?? false;

echo json_encode(['success' => $success]);
```

api-notif-read.php:

```
<?php
require_once __DIR__ . '/config.php';
header('Content-Type: application/json');

if (!isset($_SESSION['user_id'])) {
    echo json_encode(['error' => 'Not logged in']);
    exit;
}

$data = json_decode(file_get_contents('php://input'), true);
$notifId = (int)($data['id'] ?? 0);

$success = $pdo->prepare("UPDATE notifications SET is_read = 1 WHERE id = ? AND user_id =
?->execute([$notifId, $_SESSION['user_id']]) ?? false;

echo json_encode(['success' => $success]);
```

## □ Rekomendasi Gw

Pakai **Opsi 1** (disable typeErrors di settings). Alasannya:

- Error P1006 ini **false positive** — kode lo tetap jalan normal
- PDO di PHP modern jarang return false kecuali query syntax error
- Disable diagnostic ini tidak memengaruhi kualitas kode
